Dr. Robert Goldstein teaches Biology to students who come to appreciate and often chose to engage in biology research. Students report that there are no words for how amazing he makes the material through personalizing his teaching and using real life applications. He guides students in building a microscope that uses their cell phone. He is encouraging and supportive, often engaging students in conversation during meetings across campus or in other places outside of the classroom. A colleague describes his teaching as “out of the box” and students definitely confirmed that.
