Biology 102L Syllabus Fall 2019

Introductory Biology Laboratory with Research: Microbial Interactions (Hunting for Microbes)

Course description: Even though microbes are small, they live everywhere. Although they usually live in mixed populations in the natural environment, it is possible to study them when they are separated from other species from within their habitat. Looking for these microbes can be done using aseptic pure culture techniques and microscopy. One motivation for isolating and studying these microbes in the lab is that humans use natural products produced by bacteria as therapeutic drugs, including antibiotics. In this course bacteria from the soil will be collected, isolated, and analyzed to attempt to discover new natural products they may produce. Students will be able to make their own predictions about how different soil treatments might affect bacteria. Additionally, some microbes identified by students will be further pursued by members of Dr. Elizabeth Shank's microbiology research lab here at UNC. In addition to gaining experience in the scientific process, this course will enhance the topics from Introductory Biology by teaching major microbiology techniques, introducing new scientific skills, and emphasizing the collaborative nature of an authentic research project.

<table>
<thead>
<tr>
<th>Date: Week of</th>
<th>Experiment/Activity</th>
<th>Assignment Due Before Class</th>
</tr>
</thead>
</table>
| Aug 21 (401) & 22 (402) | 1) Microbe Physiology & Diversity – Why study microbes? Where are they found? Discuss as a class  
2) View protists under microscope and compare to bacteria  
3) **Stain different bacteria** to identify by shape and color using microscopy  
4) Practice the sterile streak technique | • Read Chapters 1 & 2 of Microbe Hunters (*Readings*)  
• Watch video tutorial of Gram Stain under *Videos* and Sterile streak technique under *Sterile Technique*, copy these protocols into your lab notebook  
• Read Microscopy documents under *Microscopy* |
| **LAB 1** | | |
| Aug 28 (401) & 29 (402) | 1) **Group presentations** of historical figures in microbiology with peer feedback  
2) Each group discusses a section of the assigned **scientific paper** in class  
3) Observe previously streaked plates for growth and examine under microscope, record results in your lab notebook including pictures  
4) Work in groups to come up with question about a treatment that might affect bacterial function  
5) Plate streak practice using bacterial stock plates | Read article on Bacterial Hand Contamination (link posted in Sakai) and Antibiotics in Nature article under *Readings* |
<p>| <strong>LAB 2</strong> | | |</p>
<table>
<thead>
<tr>
<th>Date</th>
<th>Lab 3</th>
<th>Lab 4</th>
<th>Lab 5</th>
<th>Lab 6</th>
</tr>
</thead>
</table>
| Sept 4 (401) | 1) **Quiz** on material from previous two weeks  
  2) Do serial dilutions (dilute known bacterial stock and plate, refrigerate for a week and count on Sept 11 & 12)  
  3) Special talk by Dr. Elizabeth Shank  
  4) Make predictions about treatments and possible effects on bacteria  
  5) Groups come up with treatment experiment then each will use own soil                      | 1) **Lab notebooks will be collected**                                                  | 1) **Lab Report Outline Due**  
  2) Determine cfu/ml from frozen aliquot serial dilutions  
  3) Pick and streak practice  
  4) Learn how to use fluorescence microscope                                                                                           | 1) Make practice coculture plates by mixing soil and provided reporter.  
  2) Re-plate mixed co-cultures and unmixed control plates for picking tomorrow during lab  
  3) Record ideas and experimental procedure in Lab notebook, **Notebook check**                                                                 |
<table>
<thead>
<tr>
<th>Date</th>
<th>Time Period</th>
<th>Task</th>
</tr>
</thead>
</table>
| Sept 26 (401) & 27 (402) | LAB 7 | 1) Examine co-culture plates and look at ratios of reporter colonies to soil colonies  
2) Identify inducing soil organisms on co-culture plates by observing fluorescence using dissecting scopes  
Work on Lab Report |
| Oct 2 (401) & 3 (402) | Midterm | Make coculture plates  
Prepare for midterm |
| Oct 3 (401) & 4 (402) | LAB 7 | 1) Record results of secondary screen  
2) Pick possible inducing colonies from Oct 2 & 3 plates. Pick a maximum of three each from untreated and treated plates.  
3) Pictures |
| Oct 9 (401) & 10 (402) | LAB 8 | Make glycerol stocks of possible inducer populations  
Lab Report Due |
| Oct 16 (401) & 17 (402) | NO LAB – FALL BREAK | Read about 16S identification and bacterial phylogeny |
| Oct 23 (401) & 24 (402) | LAB 8 | 1) Take 6 glycerol stocks of possible inducer strains and streak the strains |
| Oct 30 (401) & 31 (402) | Halloween! | 1) Set up another screen using a lawn of reporter and spot inducer for both untreated and treated soil, incubate 24 hours  
2) Notebook check |
| Oct 31 (401) & Nov 1 (402) | LAB 9 | 1) Do a fluorescence viewing (yes or no fluorescence)  
Read about BLAST under BLAST in Sakai |
| Nov 6 (401) & 7 (402) | LAB 10 | 1) Streak soil isolates you want to pursue |
### LAB 11

- **Nov 7 (401) & 8 (402)**
- 1) Examine secondary screen from new hits
- 2) Do PCR of new hits
- 3) Examine DNA sequencing results from first round of co-cultures
- 4) Do BLAST of hits
- 5) Build phylogenetic tree (individual and combined for class? Map on treatments to see if trends?)

### LAB 12

- **Nov 13 (401) & 14 (402)**
- 1) Send for DNA sequencing
- 2) Discuss what posters are and how to put one together
- 3) Clean up the lab

### LAB 13

- **Nov 20 (401) & 21 (402)**
- **Group poster presentations in lab**

- **Dec 3 3:00pm-5:00pm**
- QEP Research and Making Expo Great Hall Student Union
- Showcase research from the semester!

### Attendance: Instructions and demonstrations begin on time, so plan to get to lab early. It is expected that you read through the lab activities in the lab manual before coming to lab so you are better prepared to work on the assignments and understand what you will be doing in lab.

You must be excused by your lab instructor within 48 hours of any absence. Permission to make up the lab missed is granted for:

1. Your own illness, or illness or death in your family with a written note from you.
2. Official university function with written excuse from the official in charge.

If you know you have to miss a lab, you should immediately contact your TA (you should write down your TAs email as soon as you get it in lab). Do not assume an email has been received unless you receive a reply. You may only attend another lab to make up the one you missed if your TA has excused you. An unexcused lab deducts 10 points from your final grade and counts as a zero on any missed work.

### Safety: For safety reasons absolutely NO FOOD or DRINK is permitted in the laboratory rooms. Cell phones should be silenced during lab. Some lab exercises use dyes, stains and chemicals that might damage clothing. Pay attention to the lab you are doing each week so that you wear the appropriate clothing. You are encouraged to wear closed shoes. No visitors are allowed in the lab.

### Lab Meetings: Section 401 Wednesdays, (9:05am-12:05pm), Section 402 Thursdays, (1:00pm-4:00pm).
Outside of Lab Meetings: Some weeks require you to come in and count bacterial colonies on plates, make calculations from your data, streak pure cultures or frozen stocks, or prepare plates in advance of class (these ‘off-class’ obligations are noted in red above and will have sign up times on Sakai so you can plan around your class schedule).

Instructors: Barbara Stegenga, Coker 211, bstegenga@bio.unc.edu
Dr. Elizabeth Shank, GSB 4157, eshank@unc.edu

TAs: Farhan Lakhani and Aimee Deconinck

Sakai site: The syllabus, assigned reading, schedule, links to videos and announcements will be on the Sakai site. Please check this site regularly.

Credit hours: 1

Meeting times: 3 hours per week

Co-requisite: BIOL101

Room: Coker 214 (for both sections)

Text: There is no required text for this course. Assigned readings will come from primary literature, a book and news and will be posted on Sakai.

Lab Exercises: Assignments related to the readings and your research will be collected in class. In-lab assignments and quizzes will be given. You will receive 5 points for participating each week in discussions and lab work in addition to keeping a lab notebook.

Mid-term: One exam for the course will focus on the assigned readings, PowerPoint slides, homework, learning outcomes, quizzes, lab reports, and in-class assignments. Test materials to study: lab notebook, lab exercises, reading, slides, and learning outcomes.

Presentation: The presentation will replace a final exam. You will present your findings to the rest of the class which includes a poster presentation.

Items to bring to class each week: Lab notebook (composition book), computer, writing utensils, creativity

Grading

All written assignments are turned in to and graded by the TAs. Each of these written assignments is to be your own creative work and no collaboration outside of lab in writing these is allowed. Students do a peer review of the soil experiment draft that the TA then collects and grades. Drafts that are revised and graded are handed back to the student for use in writing the lab reports. The lab report is to be no more than 10 pages of text in length and no less than 5 pages of text. The outline should be 1-2 pages in length and the draft should be 2-3 pages in length. All written assignments are typed and include the Honor Code Pledge. The lab TAs grade lab reports from other sections to rule out any biasness.
Your grade will be determined by a quiz, midterm, daily grades, grade on the lab report, poster presentation and on cleanup/group participation. Any grading concerns (appeals) must be submitted within a week after the assignment is handed back in lab. The appeal must be typed and attached to the original assignment when turned in to the TA. Extra credit assignments are not allowed. If you are having trouble with assignments during lab, talk to your instructor first. You may also use tutoring services on campus for understanding concepts and the Writing Center for help with your written assignments. The Writing Center offers help with writing your lab report however, they can get very full with appointments. They are unable to address the science but can give you feedback on the formatting and presentation of the content.

Any assignment that is turned in late will have 10% of the value deducted for each day it is late. Grades are no longer negotiable as of the final presentation day. Computer problems are not acceptable excuses for late work therefore, you should always save your work frequently and in more than one location. Do not wait until the last minute to print your work.

Lab Reports: Lab reports are based on experiments performed in lab and should be written completely in your own words. Quotations should be cited. Reports should be comprehensive descriptions of the hypotheses of interest, experimental methods designed to test those hypotheses, results of the experiments, and interpretations of the results. Guidelines for writing a lab report are in the laboratory manual and include:

- Limitation of 10 pages of text exclusive of title page and graphs, charts and tables. Lab reports should not be less than 5 pages of text.
- All text should be double-spaced
- All margins should be 1 inch
- Written in past tense and in paragraph form with the following sections: Introduction, Materials and Methods, Results and Discussion.

To help you write a full scientific lab report, Biology 102L requires students to write an outline (1-2 pages long), a partial draft (2-3 pages long and typed) and critique another student’s draft report of the experiment. The outline should be written in standard hierarchichal outline format using numbers and letters to identify sections and major points. The partial rough draft of the lab report should include the Introduction and Materials and Methods sections. The partial rough draft will then be critiqued in lab by your lab partners.

Exams: Biology 102L has one exam. The midterm is one hour and covers material from the first lab through the material covered just before the midterm. Leaving the lab during an exam is not permitted unless excused by the TA. Cell phones must remain in the lab if leaving to use the restroom. Exams are practical and the format includes short answer, true/false, multiple choice and calculations.
Studying for the exam: In addition to studying terms throughout the manual and understanding the Learning Outcomes for each lab, it is important to know what you did in lab and why it is important. Ask yourself what was the goal of today’s lab? How does it relate to what you studied in lecture? What was the purpose of using specific equipment? Peer tutoring is available in Dey Hall for students struggling with biological concepts.

Understanding the UNC Honor Code

The Biology 102 Lab course upholds the Honor Code within the University of North Carolina’s Honor System. Academic progress in this course is determined by all graded work, therefore, no collaboration on any written work is allowed. We do encourage students to study together and collaborate on assignments that are not collected for grading or on assignments where permission to collaborate is given (Historical Microbiologist and Poster Presentation). Information about the Honor Code can be found at https://studentconduct.unc.edu/instrument.

So that there are no misunderstandings about academic integrity, we have provided examples of honor code violations below. In this course, students often work in pairs or groups to collect data. Students should not collaborate on any written assignments after leaving lab. Submitting work from other sources that is not properly referenced is also a violation of academic integrity. All work submitted must be your own independent written work. If you ever have trouble with an assignment, you should see your TA or instructor for help instead of asking help from your peers.

Possible honor code violations:

- Unauthorized collaboration on written assignments – all written work must be your own and written in your own words. Emailing, texting or using any other form of communication to discuss the writing of the assignment is prohibited.
- Plagiarism – practice of taking someone else’s work and passing them off as one’s own
- Cheating – Unauthorized behavior to gain an advantage (as on exams)
- Violation of procedures pertaining to the academic process (providing materials such as lab reports, exams, essays, quizzes and outlines) for others to use

Honor Code Pledge below should be included on the title page of LAB REPORTS.

“I pledge that no unauthorized assistance has been given or received in the completion of this work. Experiments described were performed by me and/or my lab group and this write-up is entirely my own creative work.” Signature: ____________________________

For ALL OTHER WRITTEN ASSIGNMENTS, use the Honor Code pledge below:

“I pledge that I have neither given nor received unauthorized assistance on this assignment and it is entirely my own creative work.”

Signature: ____________________________
COPYRIGHT POLICY
All course materials including your class notes and in-class assignments are covered by University Copyright Policy, @http://www.unc.edu/campus/policies/copyright%20policy%20200008319.pdf. This means it is illegal and an honor code offense to share your notes or any other course materials with anyone not directly affiliated with this particular class, i.e., no uploading materials to non-class sharing sites.

Resources
For students who register through Accessibility Resources and Service (ARS) https://ars.unc.edu/ for different types of disabilities, you will be given accommodations such as extended time on exams or help in the lab if needed. Please note that lab exams can only be taken in the lab and not at a specific testing location through ARS. The lab exams have a practical component to them which ARS cannot provide.

The Department of Biology values the perspectives of individuals from all backgrounds reflecting the diversity of our students. We broadly define diversity to include race, gender identity, national origin, ethnicity, religion, social class, age, sexual orientation, political background, and physical and learning ability. We strive to make this lab and this department an inclusive space for all students.

Biology 102L Assignments

<table>
<thead>
<tr>
<th>Topic</th>
<th>Assignment Due</th>
</tr>
</thead>
</table>
| Microbes, Microscopy, Identifying Bacteria              | Gram Stain and Sterile Technique protocols written in Lab Notebook – 2pts  
|                                                        | Bacteria Identification – 2pts          |
| Scientific Paper Analysis, Microscopy continued, Graph Sample Data | Historical Microbiologist Presentations – 4pts  
|                                                        | Scientific Paper Section Discussions – 4pts  
|                                                        | Graph in Excel – 2pts                   |
| Serial Dilutions, Practice Plate Streaking, Special Talk | Quiz - 10pts                           |
| Treatment of Soil                                      | Lab Notebook Checked – 5pts             
|                                                        | Lab Report Outline Due – 4pts           |
| Midterm                                                | Midterm – 30pts                        |
| Pick and Streak Practice, Fluorescence Microscopy, Begin Coculture Plate Practice | Lab Notebook Checked – 5pts |
| Revise Lab Reports, Re-plate mixed cocultures          | Take pictures of possible inducing microbes – 2pts |
| Lab Work                                               | Lab Report Due – 20pts                  
|                                                        | Lab Notebook Checked – 5pts             |
| Lab Work                                               | Participation – 5pts                   |
| Final Day                                              | Poster Presentation – 50pts             |

The final exam will be replaced by the presentation the last week of the lab.
**Gradescope** will be used to grade the midterm and the lab report in this course. It allows for providing consistent feedback to students on assignments quickly.

If your instructor gave you the entry code for the course, you will be able to add yourself as a student. To do this, if you already have a Gradescope account, log into that account and navigate to your **Account Dashboard** by clicking the Gradescope logo in the top left corner, then click **Add Course** in the bottom right corner. If you don’t have a Gradescope account yet, go to their [homepage](#), click **Sign Up** in the upper right corner, select Student, and put in your entry code in the sign-up form. If the entry code doesn’t work, please email your instructor for details on how to access the course.

If you don’t have an entry code, your instructor must add you to the course. Once you’re added to a course, you’ll get an email asking you to set your password if this is your first-time logging into Gradescope or an email with a link to the course if you already have an existing account. If the set password link in this email expires, you can request a new link from the **Reset Password** page.

**Grade Scale:**

<table>
<thead>
<tr>
<th>Grade</th>
<th>Range</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>93-100</td>
<td>83-86</td>
</tr>
<tr>
<td>A-</td>
<td>90-92</td>
<td>80-82</td>
</tr>
<tr>
<td>B</td>
<td>77-79</td>
<td>73-76</td>
</tr>
<tr>
<td>B-</td>
<td>70-72</td>
<td>67-69</td>
</tr>
<tr>
<td>C</td>
<td>67-69</td>
<td>60-66</td>
</tr>
<tr>
<td>C-</td>
<td>&lt;60</td>
<td>F</td>
</tr>
</tbody>
</table>

Final grades will be assigned on the total number of points at the end of the semester.

**Course Goals:** The lecture and the reading material will provide the basic content. You will gain hands-on experience with techniques in microbiology and molecular biology, learn how to formulate testable hypotheses, and design experiments to test them. You will read scientific literature and learn to take notes and write like a scientist.

**Doing the Science** will allow you to acquire basic laboratory techniques and skills needed to identify and screen for microbes. You will hopefully discover new small molecules secreted from soil microorganisms through co-culture screening. PCR and DNA sequencing will be performed to determine the species identity if time permits.

**Sharing the science** involves writing about your findings and giving a talk with your lab partners to the class and members of the scientific community about your science.

**Understanding and communicating the relevance of the science** includes reading and discussing articles on interactions within species of microorganisms and understanding how these interactions relate to human health.
